

Press Release

New Motorised Roman Blind System Silent Gliss 2350

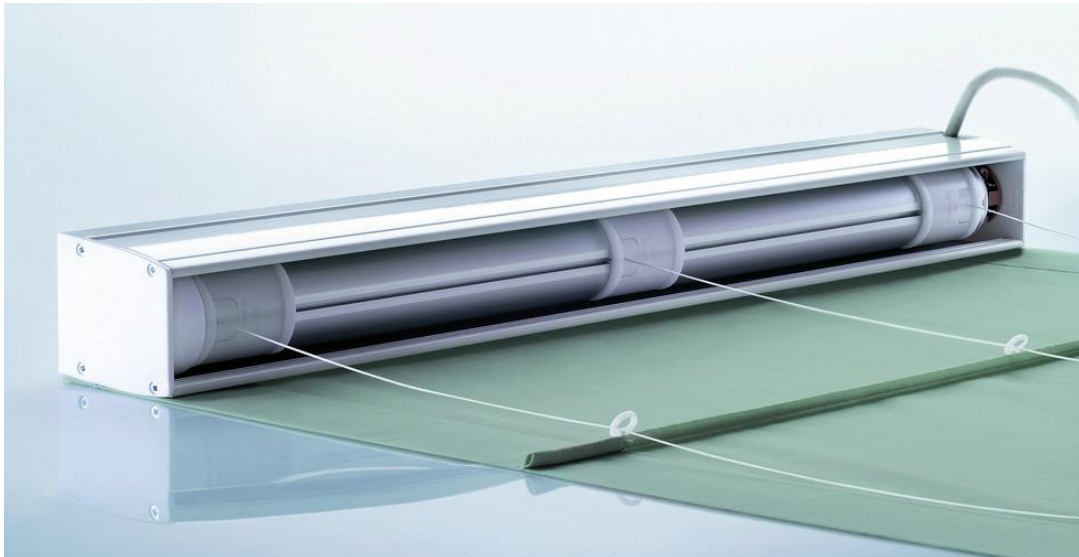

The system Silent Gliss 2350 is a remarkably elegant roman blind system with precision mechanisms concealed in a discreet and unobtrusive profile. The system is able to cover a large application area, up to 36 m² and it carries fabrics up to 15 kg.

With the introduction of the Silent Gliss 2350, Silent Gliss is able to offer the first Silent Gliss roman blind system with tubular motor. This exclusive system is composed of very few parts which allow an easy installation and handling. It can be comfortably operated by fixed wall switch or radio remote control.

The unique cord release mechanism, which was already introduced with the Roman Blind Systems Silent Gliss 2320 and 2330, allows detaching and re-fixing of cords within seconds. Furthermore, cords do not need to be separated from the fabric for cleaning as the cord release pins guarantee that cords stay in place during the cleaning process.

Side guides for sloping applications and for stabilizing vertical applications are also available with the system Silent Gliss 2350 when used in combination with the hard fold confectioning.

Silent Gliss 2350

The system Silent Gliss 2350 is composed of a single cassette and very few parts which allow easy assembling and installation.

Can be combined and operated with the Remote Control System Silent Gliss 9940

First Silent Gliss roman blind system using a tubular motor

Velcro tape and removable pins for simple take off and easy cleaning

The system Silent Gliss 2350 uses the same easy wind-up mechanism as the systems Silent Gliss 2320 and 2330
